

Artipic 2.3 Release Notes

Major Enhancements

1. Last filter and last adjustment

It is possible to apply again and again a filter or an adjustment that have been applied latest without opening the parameters window, but just by simply using keyboard shortcuts: Ctrl+F or Ctrl+Shift+F for the last filter or last adjustment accordingly. The parameters entered for the latest filter or adjustment will be used automatically.

2. Load an image right to a layer or mask

It is now possible to load images right to layers or masks with drag&drop from outside Artipic. It simplifies operating with layers and masks for creating compositions. See the full description in the User Manual (Menu "Help", item 2.4.7).

3. RAW converter improvements

RAW converter now provides a possibility to adjust the white balancing of a picture by using a "Grey Card" approach. "Grey Card" can be located by simply dragging mouse over the picture area or by clicking to a particular point on the picture. In addition, gamma presets are available now. See the full description in the User Manual (Menu "Help", item 6.7).

4. Strength for the blurring brush

It is now possible to set strength of the blurring brush. The strength parameters can be adjusted within a "1 – 100%" range with 100% meaning the maximum blurring effect.

5. New RAW formats

New RAW formats supported. The camera list is extended with Mamiya, Pentax, Polaroid, Ricoh, Samsung and Sigma cameras. Along with that, the list of formats extended with MEF, MOS, PEF, SRW and X3F. See the full list in the User Manual (Menu "Help", item 6.7).

6. Adobe Photoshop file format (.psd)

It is possible to read the composite image of Adobe Photoshop PSD file format.

7. Export and Share configuration

It is possible to add, delete or modify new entries for Export&Share drop-down lists (both dimensions and sizes) right on the main toolbar. All the changes done can further be adjusted in Preferences.

8. Color profiles in Batch Processing

It is now possible to set up color profiles in the output settings in Batch Processing.

Major defect resolution

- Processing various image formats stabilized.
- Keyboard shortcuts adjusted to fit the common practices.
- Color space conversion is now available on opening files.
